What is the IoT...

The Internet of Things (IoT) is a scenario in which objects, animals or people are provided with unique identifiers and the ability to transfer data over a network without requiring human-to-human or human-to-computer interaction.

Open Source Operating Systems for the IoT

- ▶ FreeRTOS
- ▶ Riot
- ▶ Contiki
- ▶ TinyOS
- ▶ OpenWSN
- ▶ Embedded Linux

FreeRTOS

- ▶ FreeRTOS is designed to be small and simple.
- ▶ The kernel itself consists of only three or four C files.
- ▶ It provides methods for multiple threads or tasks, mutexes, semaphores and software timers.
- ▶ Key features are very small memory footprint, low overhead, and very fast execution.

- ▶ RIOT is a real-time multi-threading operating system.
- ▶ RIOT is based on design objectives including:
 - Energy-Efficiency
 - Reliability
 - Real-Time Capabilities
 - Small Memory Footprint
 - Modularity
 - Uniform API Accessindependent of the underlying hardware
(this API offers partial POSIX compliance)
